DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3, 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Kuczer (U.S. Patent number 5,929,641).

Regarding claim 1, Kuczer discloses a focus voltage generator for a tensioned focus mask (100) of a cathode ray tube of video display apparatus having a first plurality of spaced apart strands (20) and a second plurality of spaced apart crosswires (40) separated from said strands, comprising:

a source (23) of a first signal at a frequency related to a deflection frequency; and

a waveform generator (255, 256) responsive to said first signal for generating a dynamic focus voltage that varies in accordance with a position of an electron beam on a screen of said cathode ray tube and developed between said strands and crosswires (Fig. 8, col. 3, lines 15-50).

Regarding claim 3, Kuczer discloses the focus voltage generator wherein said dynamic focus voltage includes a direct current voltage component (Fig. 8).

Regarding claim 3, Kuczer discloses the focus voltage generator wherein said waveform generator comprises a full-wave rectified sinewave generator (227) at one of a horizontal

deflection frequency and a vertical deflection frequency (Fig. 7, col. 5, lines 30-40, col. 6, lines 30-40).

Allowable Subject Matter

3. Claims 2 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

None of the prior art teaches the focus voltage generator wherein, at each instant, the dynamic focus voltage is the same between each of the strands and each of the crosswires, and wherein the dynamic focus voltage includes a direct current voltage component.
